**DETAILED ACTION**

***Election/Restrictions***

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

To have a general inventive concept under PCT rule 13.1, the inventions need to be linked by a special technical feature. The special technical feature recited in claim 1 is the expression of NOS2 by p53 mutant cells. Reiger et al Oncogene vol. 17 p. 2323 (1998) describes that NOS expression is under the control of p53. Therefore the technical feature recited in claim 1 is not special. Accordingly the groups are not so linked as to form a single general concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in response to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-10 drawn to in vitro screening for NOS2 modulators.

Group II, claim(s) 11-18 drawn to in vivo screening for NOS2 modulators.

Group III, claim(s) 19-20 drawn to predicting the benefits of NOS2 inhibitors to a cancer patient

Group IV, claim(s) 21-22 drawn to treating cancer using NOS2 inhibitors.

2. The inventions listed as Groups I-IV do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: As set forth above, in view of the teaching of Reiger et al the groups are not so linked as to form a single general concept under PCT Rule 13.1 because the technical feature of claim 1 is not special.

The methods of Inventions I- IV differ in the method objectives, method steps and parameters and in the reagents used. Invention I only requires in vitro steps whereas Invention II required in vivo steps. The result in Invention III is "predicting" whereas the end result of Invention IV is a treatment. The examination of all groups would require different searches in the U.S. PATENT shoes and the scientific literature and would require the consideration of different patentability issues. Thus Inventions I-IV are separate and distinct in having different method objectives, method steps and parameters and in the reagents used and are patentably distinct.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter and different searches in the patent literature, restriction for examination purposes as indicated is proper.
